Abstract (en)

[origin: EP0373326A1] Window/door frame (1), having a sash frame (2) and a mounting chamber (3) which receives the customary mounting, in which a reinforcing plate (4) which substantially covers the mounting chamber (3) is arranged internally on the frame web (1'), which is present on the outside of the window or door and points towards the gap of the window or door. In order to improve burglary prevention in the case of windows, doors or the like of the type mentioned, in particular to make it more difficult to bend open the window/door frame web, it is proposed according to the invention that the reinforcing plate (4) has at least one projection (5) directed into the mounting chamber (3). <IMAGE>
