Abstract (en)
[origin: EP0373339A1] A light-sensitive silver halide material having a base and at least one light-sensitive silver halide emulsion layer, in which each emulsion contains an effective quantity of at least one compound from at least two of the compound classes A, B, C and D listed below, A) compounds of the general formula I <IMAGE> B) compounds of the general formula II <IMAGE> or tautomers thereof, C) compounds of the general formula III <IMAGE> D) compounds of the general formula IV <IMAGE> wherein R1-R3, R11-R19, Y, Z, m and n are as defined in the description, is distinguished by effective stabilisation of the latent image with simultaneous minimisation of a rise in fog and loss in sensitivity.
