Abstract (en)
[origin: EP0373349A2] A liquid cleansing agent with improved detergency for hard surfaces contains 0.02 to 40 wt.% of a mixture of anionic tensides consisting of (a) sulphated hydroxyalkylpolyethylene glycol ethers or hydroxyalkylpolypropylene glycol ethers of general formula $R_{<1>-}CH(SO_3M)-CH(R_{<3>-})(OCHR_{<4>-}CH_2)_n-OR_{<2>-}$ where $R_{<1>-} = H$ or C1-16 alkyl; $R_{<2>-} = C1-22$ alkyl; $R_{<3>-} = C1-16$ alkyl or preferably H; $R_{<4>-} = -CH_3$ or preferably H; M = H, ammonium, alkylammonium, alkanolammonium (C1-4) or a univalent metal atom; n = 0-20, and (b) dioctylsulphosuccinates in a mixing ratio of 1:10 to 10:1, as well as organic or inorganic skeleton substances. Preferably, the aqueous solutions of the detergent contain solubilizers such as toluol, xylol or cumol sulphonate, low molecular alcohols or short-chain fatty alcohols and in particular ethers of identical or different polyhydric alcohols (C1-6), in a weight ratio of tenside to solubilizer of 1:0 to 1:2, as well as other usual constituents such as colorants and aromas, preservatives and non-ionic tensides.
