Abstract (en)

[origin: EP0373519A2] An incompletely oriented yarn is introduced and drawn in the air-texturing machine. The multi-thread yarn is shaped to form slings, loops or arcs in the air-texturing nozzle. <??>A substantial reduction of the residual shrinkage is obtained if the yarn entering the air-texturing nozzle is heated. This can be carried out preferably by means of the galette which precedes the air-texturing nozzle. <IMAGE>
