Abstract (en)  
[origin: EP0373804A2] A timepiece dial assembly is provided suitable for a timepiece such as a wrist watch. The assembly includes a pair of spaced apart, superimposed glasses (1, 2) which are apertured intermediate their edges to provide a passage (3) through the superimposed glasses (1, 2) for a hand carrying motion shaft (4) of a timepiece movement (5) to project therethrough. The first or top glass (1) is transparent and the glasses (1, 2) are sealed together around their outer peripheries and sealed together around their inner peripheries defining the passage (3), to define between the glasses (1, 2) a sealed chamber (6) containing a fluid providing a decorative effect visible through the first or top glass (1). At least one of the glasses (1 or 2) carries numbers or marks (13) providing time indications.
