Abstract (en)

[origin: EP0373984A1] According to the invention, a mounting ferrule (9) fixed to the bowl (7) is arranged between a supporting flange (5) fixed to the chamber-bottom dome cut-out and a stop ring (6), and elastic means (10) for the radial positioning of the bowl (7) and capable of centering the said bowl (7) in the supporting flange (5) during the mounting of the injectors are interposed radially between the said mounting ferrule (9) and the supporting flange (5). <??>The invention is used for the mounting of the combustion chambers of turbine engines. <IMAGE>
