Abstract (en)

A sash lock, particularly for sashes fabricated from hollow extruded metal sectional members or plastics moldings, comprising a box-type body (8) which is secured inside a recess (6) in the sash upright (1), is provided with a pair of oppositely located lugs (21,22) integral with the box-type body (8) and being each formed with a respective threaded hole (23,24) accessible from outside the upright. The handle (25) for operating the sash is mounted by means of screw fasteners (26,27) engaging in the threaded holes (23,24) of said lugs. Thus, the benefits of a reliable connection are obtained which can be implemented between the handle and the sash in a rapid manner.
