Abstract (en)

[origin: EP0374496A2] In the feed device according to the invention for sheets taken individually from a stack which, after they have been registered, are fed to a printing machine, front markers (1) are provided which are connected fixedly in terms of rotation to a front marker shaft (2). To avoid complicated measures for adjusting the front markers (1) with the aim of adapting them to a curved contour of the fronts of the sheets, the feed device is fitted with a bending device (11, 20, 24) which acts in a steady-state manner on the front marker shaft (2). <??>A preferred exemplary embodiment has a bending device (11, 20, 24) interacting with swivelling means (14) for slanting the front marker shaft (2). <IMAGE>
