Abstract (en)
[origin: EP0374529A2] For the prevention of unauthorised removal of goods from a goods shaft of an automatic goods dispenser, in which, below the goods shaft, a module-type dispensing device is provided with a pushing-out device/ejector which is movable over its surface, it is proposed to provide, in the ejection path of the goods packages or in front of the dispensing opening of the goods shaft, an electromagnetically operable blocking element which, in the unoperated position, that is to say in its rest position, is pressed into the blocking position by means of elastic force.
