Abstract (en)
[origin: EP0374616A1] A dish-washing machine having an operating container (3), which can be closed by a door, has a ventilation opening (15) which merges into an outside air duct (14). The outside air duct is fed from the free atmosphere by a ventilator (9) and opens out into the free atmosphere. In this case, in order to be able to remove moist air from the operating container (3) in a simple manner during the drying operation, a secondary air duct (13) branches off after the ventilator (9) into the operating container (3), via which secondary air duct fresh air is blown into the operating container (3), which fresh air escapes once more through the ventilation opening. <IMAGE>
