Abstract (en)

[origin: EP0375521A1] The present invention relates to a switch comprising a rocker (12), a base (1), a rocker support (2), a conducting strip (14), provided with a main arm (15) in contact with a rocker support (2) and at least one secondary arm (16). According to the invention the secondary arm (16) is offset axially in relation to the main arm (15) and engages with a support zone (18), carried on either side of the rocker support (2) by the base (1). Means of engagement (19, 20) are provided between the rocker (12) and the secondary arm (16). The strip is mounted under pre-stress between the rocker support (2) and the support zone (18). <IMAGE>
