Abstract (en)

[origin: EP0375623A2] Illumination strip comprising an insulating support (5) below which there are disposed two conductive bands (2 and 4) which are superposed and separated by an insulating body (3). The conductive bands have caps (23, 43) cut out in the direction of the band and folded back through 90 DEG, the free end of which is arranged to position an electrical contact of a current-consuming element. <??>Each tab (23, 43) comprises a cutout (26, 46) delimiting a tongue (27, 47) connected to said tab and capable of being deformed in such a manner that its free edge (28, 48) cooperates with the upper face (55) of the insulating support. <IMAGE>
