Abstract (en)

[origin: WO8912896A1] Process and device for recording television images and for reproducing them after a short period, in order to remove the advertising material from a television broadcast. The process according to the invention is characterized in that television images are recorded in real time for reproduction with a slight time-lag, so as to remove the advertising material by accelerated playback. Said device uses a recording support of the direct-access memory type, and comprises a playback mechanism and a recording mechanism, the playback mechanism and recording mechanism being separate and independent, with the possibility of operating simultaneously, and capable of being located and moved independently of one another on the recording support, and including buffer memories for synchronization and speed matching. The device according to the invention is intended in particular for audio-visual use by the public at large.
