Abstract (en)
[origin: EP0375843A1] A stamped knitting tool for textile machines, particularly for knitting machines, has a shank (7) with at least one foot (8) and at least two guide parts (12) which are continuous from the shank top edge (10) to the shank bottom edge (11) and one of which is arranged underneath a foot. The two guide parts are connected to one another by means of a narrow web (16) on the shank top edge and on the shank bottom edge, at least one of the two webs having a height of at most 1.1 mm, and the two webs, together with the guide parts assigned to them, limiting a respective recess, in the shank, designed as a free space (15) and filled with a vibration-damping material (17) connected firmly to the shank. At the same time, at least one web is severed completely by a transverse slot (18) extending transversely relative to the longitudinal axis of the shank. <IMAGE>
