Abstract (en)

[origin: EP0375895A1] The strip-like construction element has two parallel and spaced-apart bar- or cord- or strip-like supports (1, 2) which are connected to each other by a series of individual web-like members (3). Of two adjacent boundary edges (4) of two web-like members (3), following one directly after the other in the series, at least one has a course which tapers the central cross-sectional region of the member (3) to form a partially circumferentially closed insertion opening (5). The web-like members (3) are made of plastic and are sprayed directly onto the bar- or cord- or strip-like supports (1, 2). <IMAGE>
