Abstract (en)
[origin: EP0375957A2] For a mains-operated automatic vending machine with motor-driven product-dispensing devices, the dispensing devices being equipped with ejectors which, in their basic position, close the dispensing orifice of the product shafts, it is proposed to equip the drive motors of the dispensing units with energy accumulators which, if the mains voltage fails and a dispensing operation has commenced, cause the ejectors to run further into their basic position. <IMAGE>
