Abstract (en)  
[origin: CA2006875A1] A device for slitting and curling ornamental packaging ribbons is formed with a cutting punch which is elastically and movably connected with a counterplate. On the side of the cutting punch facing the counterplate, the cutting punch has a plurality of cutting elements embodied in the form of plastic blades extending in the direction of the relative motion between the device and the ornamental packaging ribbon. The counterplate is formed as a matrix with holes corresponding with the plastic blades into which the latter are inserted.
