Abstract (en)

[origin: JPH02234789A] PURPOSE: To perform edging to the edge part of a material by providing the machine with a driving mechanism, sewing mechanism, needle mechanism, looping mechanism and thread feed mechanism for feeding a thread to the needle mechanism and the looping mechanism. CONSTITUTION: A sewing gripper 66 tensions a sewing thread-linking loop 139 around a material edge 135 through a forked grip 150 and moves it to a position over a needle 46, and the needle is inserted through the linking loop 139. A link sewing gripper 66 releases the linking loop 139, the needle is stuck through a material 80, and a thread loop is formed around the arm of the upper linking loop. The sewing thread gripper 65 is passed between the needle and the thread above a needle eye 45 and the sewing thread is passed between lower thread loops for forming the linking loop. A sewing thread guide roller 154 in contact with the opening of a sewing thread guide port 47 facilitates refastening when the sewing thread is unfastened. The linking loop 139 is formed between a sewing thread feed part above the sewing thread guide path 47 and a sewing portion continued to the preceding linking loop.

Abstract (de)

Die Nähmaschine dient zum Umketteln von Bodenbelägen und ist transportabel ausgebildet, so daß sie außer dem stationären Einsatz auch entlang der zu umkettelnden Materialkante gefahren werden kann. Sie erzeugt eine Zweifaden-Überwendlichnaht und hat eine Schneidvorrichtung mit einem Messer (108) zur Abrundung der Materialecken vor dem Ketteln, die bei Annäherung einer Ecke, von einer Fotozelle (117) gesteuert, automatisch in Gang gesetzt wird.
