Abstract (en)
[origin: EP0377366A1] The connection strip comprises an extruded section (3) made of an extrudable and weldable material, capable of being anchored into the concrete rising part (1) of the construction, flush with its surface to which is applied the flashing (2) of the impervious facing whose upper border (4) is intended to be welded (at 22) on the visible part of the extruded section. According to the invention, the extruded section (3) has a flattened tubular body (7), a concealed side (8) of which forms the bottom of a groove and a visible side (9) of which forms a cover closing the groove for protecting the bottom (8) against any penetration of laitance and the said cover (9) liberating the groove in order to enable the border (4) to be welded onto the bottom (8) and to cover the said border. <IMAGE>
