Abstract (en)

[origin: EP0377372A1] The striker (1) has at least one receptacle (8) intended for receiving a bolt (5) of a lock (4) mounted on the door (3), this receptacle being formed in an outer case (10) designed to be fastened to the frame (2). The striker (1) possesses, in the region of each receptacle (8) provided for a bolt (5), a stop (16) mounted movably inside the receptacle by adjusting means (R) capable of being actuated from outside the case (10), these adjusting means (R) being designed to allow the stop (16) to be pressed against the corresponding bolt (5) in the closing position and the stop to be blocked in this position counter to a door-opening force which may be transmitted to the bolt. <IMAGE>
