Abstract (en)

[origin: EP0377378A1] The present invention relates to a method and apparatus for the remote control of at least one piece of drill-string equipment from an instruction transmitted from the surface. The method according to the invention involves the following steps - transmission from the surface of a first information sequence conforming to a predetermined sequence, - detection of a second sequence resulting from the transmission of the first sequence and comparison of this second sequence with another predetermined sequence, - if there is identity between these last two sequences, the control of said piece of equipment is carried out. <IMAGE>
