Abstract (en)

[origin: EP0377463A2] A silver halide color photographic material comprising at least one red-sensitive emulsion layer, at least one green-sensitive emulsion layer, at least one blue-sensitive emulsion layer and at least one yellow filter layer provided on a support. With the material, the relationship between the sensitivity (SG_{480}) of the green-sensitive silver halide emulsion layer to monochromatic light of 480 nm and the sensitivity (SB_{480}) of the blue-sensitive silver halide emulsion layer to monochromatic light of 480 nm is in the range of $-0.85 \leq SG_{480} - SB_{480} \leq 0.2$ when measured after the silver halide color photographic material having ISO sensitivity of S is uniformly exposed to white light of 2/S lux.sec and the optical density of the yellow filter layer at peak wavelength is 1.0 or above.
