Abstract (en)

[origin: EP0377770A1] The invention relates to a table system, in which several tables (T1, T2, T3) can be combined with polygonal table tops to form a pattern of tables in such a way that at least the corners of the table tops adjoin one another and the table tops are supported by table legs situated at the corners. Several corners of different table tops in each case are supported by one table leg (1) in each case, it being possible in each case for two table legs (1) to be connected to each other at their upper end by a profiled rod (14, 15, 27, 28) to form a table top frame. The profiled rods (14, 15, 27, 28) have a holding device (24, 29) for holding a table top placed in a fitting manner in the table top frame. <IMAGE>
