Abstract (en)

[origin: EP0377777A1] In a ratchet wrench, the working head (3) is angularly adjustable relative to the handle (1) and can be arrested in the angularly adjusted position by a manually moveable locking bar which is arranged in the handle and to which a ring of locking openings (13) on the working head (3) is assigned. To facilitate handling, the handle (1) is provided with a central guide channel (8) reaching up to the region of the handgrip (2), and the locking bar consists of a rod (9) which is displaceable in the guide channel and is rigidly connected to a slide (15) lying within reach of the thumb on the handgrip (2). <IMAGE>
