Abstract (en)

A propellant containing device for a power actuated tool used to drive fasteners into concrete and the like. A cartridge member has an inner substantially cylindrical recess (20). The recess has an inner area (22) and an outer area (21) and is filled with propellant (33). A cap closure member (13) is used to seal the cartridge member and holds a detonator charge (42). An annular skirt (24) formed integral with the cartridge member is located so as to act as one half of the anvil when the detonator charge (42) is compressed between the annular skirt (24) and the cap closure member (13) using rim-fire techniques. The cap closure member and the cartridge member are made from a suitable plastic material.
