Abstract (en)
[origin: WO9001209A1] Electrocarrier cable comprising conductor elements and support or carrier elements. According to the invention, the conductors (7) are lapped on insulating cores (2) which are themselves stranded to an elongate central strand (1), the core thus formed being included into a braid (3) of arimide fibres, coated with a sheath (4). Applications to the transport of low currents particularly in oceanography.
