Abstract (en)

[origin: EP0378725A1] In order to set up a skateboard track (1) which can be constructed in the open air, has a long service life and yet has excellent rolling characteristics, it is proposed to construct the skateboard track from individual modules (3, 4, 6) which consist of precast concrete and thus have excellent running characteristics on their running side, and, at the same time, produce less noise than the previously known tracks.
