Abstract (en)  
[origin: EP0379033A2] The toy building block system comprises building blocks having at least one surface, which is provided in the manner of a grid with grooves, in which at least one second building block can be inserted in a clamping manner. To achieve an aesthetically attractive appearance and to implement outside wall designs which deviate from the grid dimension, provision is made for the individual blocks to have catch tongues (5) which can be inserted in the catch grooves (2) and project over the lateral boundary edges (6) of the associated building block side walls (4), the catch tongues (5) being elastically deflectable and having a slightly smaller dimension (R') in relation to the grid dimension (R) of the catch grooves (2), and at least two catch tongues (5) being provided on one block. <IMAGE>
