Abstract (en)

[origin: WO9008003A1] The device for mounting and cooling the graphite block (1) of a mould wall, in particular for pressure casting metalurgical products, comprises lower and upper means for mounting said block (1) onto the frame (7). The lower mounting means consists of a container (5) for collecting the cooling liquid introduced into the vertical bores (2) provided in the block (1), and the upper mounting means rest on an upper metal block (38) constituting the liquid feeding means (31), so that the graphite block is slightly longitudinally offset in relation to said mounting means.
