Abstract (en)
[origin: WO8902379A1] A security/alarm system for apparatus such as a motor car where previously the installation of such a system required wiring to penetrate a fire-wall separating the cabin from the engine compartment, such as to link up with an ignition-switch within the compartment. The invention provides a system which, including the enabling/disabling switch, is containable wholly within the engine compartment, the switch being associated not with cabin controls but with engine points responsive thereto.
