Abstract (en)
[origin: EP0379600A1] A double-sided textile machine with a plurality of winding units for producing cross-wound bobbins, especially a two-for-one twister, with a device (14, 15) for collecting and transporting away the cross- wound bobbins (10.1, 10.2) produced, having two conveyor devices (14, 15) which move longitudinally in the interior of the machine in the region of the machine centre and are arranged immediately one above the other in at least two planes and each of which can be fed from at least one machine side. A bobbin delivery station is arranged at the end of the conveyor device. The conveyor devices can have two conveyor bands (14, 15) arranged one above the other, a transfer device transferring the cross-wound bobbins from one conveyor band (14) to the other conveyor band (15) being arranged at one end of the two conveyor bands. The conveyor devices can also have a plurality of bobbin baskets which are guided so as to be movable in the longitudinal direction of the machine, each bobbin basket having two depositing devices arranged one above the other, each for a bobbin. <IMAGE>
