Abstract (en)
[origin: EP0379854A2] The all-weather radial tyre for lorry driving axles has a tread profile with a central belt and transverse grooves in the lateral tread areas. In a crown area (I), whose width is at least 30% of the tread width (B), in addition to the circumferential grooves (2, 2') limiting the central belt (1, 1') only a multiplicity of transversely extending fine indents (3, 3', 4, 4', 5, 5') is provided. Some of these fine indents (5, 5') also pass through the lateral tread areas (II). Therefore, this tyre also has excellent winter properties. <IMAGE>
