Abstract (en)
[origin: EP0379875A2] The invention relates to a device for manufacturing a sealing diaphragm using an annular cutting blade, the annular cutting blade being made up of a plurality of segments and having, on its inner circumference, a wall which is inclined relative to the vertical and interacts with a counterwall which is inclined relative to the vertical and forms part of a fixed die. During the movement of a blank holder for the purpose of sealing the diaphragm shape, the annular cutting blade segments can be moved downwards and thus outwards. <IMAGE>
