Abstract (en)
[origin: EP0380444A1] The boot comprises a lower part (1), encasing the foot and the heel, and an upper (2), in the form of a collar articulated on this lower part, and an oblique band (10) in synthetic material, on at least one side of the boot, the lower edge of which bears on a rim (12) of the upper such that the band elastically opposes a forward rotation of the upper. The flexibility of the band (10), that is to say of the boot, can be adjusted by adjustment means (15, 16). <IMAGE>
