Abstract (en)
[origin: WO8902241A1] A hooking device for a clothing article, towel or the like, holding the article in that a portion of the same is wedged in the device, the device comprising a first element for securing to a wall, and at least one second element disclosing a wedge-shaped slit through which the said portion of the article is to be passed in the direction of the narrowest part of the slit. The second element is a column (2) protruding from the first element, the slit (4) of the column extending in the longitudinal direction of the column and serving as a means of suspension for a hanger attached to the article.
