Abstract (en)
[origin: WO9001593A1] A wet-room wall structure comprising a wall covering and a framework intended for erection against an existing wall. The invention is characterized in that the framework includes a top horizontal member (2), which is provided with a downwardly facing U-shaped channel (3) and a bottom horizontal member (4), which is provided with an upwardly facing U-shaped channel (5); in that vertical members (8) extend between the top and bottom members, these vertical members (8) being provided with two channels (9, 10) which face away from one another; in that all of the U-shaped channels (3, 4, 9, 10) are located at a distance from that part of the top, bottom and vertical members (2; 4; 8) intended to be located nearest a rearwardly lying wall (1). The wall structure also includes wall attachment devices (20), which function to secure the framework members (2; 4; 8) to the rearwardly lying wall (1) and also to space the vertical members (8) from the existing wall (1) by means of the wall attachment device (20). The wall structure also includes water-impervious and moisture-impervious panels which are intended to be inserted into and carried by the afore-mentioned U-shaped channels (3, 4, 9, 10).
