Abstract (en)

[origin: EP0380747A2] The invention relates to a filler material for arranging in distance profiles of insulating glazings, consisting of a flexible tube of air- and water vapour-permeable material in which a particulate adsorption material is accommodated, characterised by tubular zones (4) filled with adsorption material (6) and empty tubular zones (5) which are placed together in a row and separated from one another by means of flat seams (7).
