Abstract (en)
[origin: EP0381012A2] In a sheet-turning device for rotary printing machines in series construction, in which the printing cylinders of successive printing units are connected by at least one transfer drum, a turning drum is arranged downstream of the storage drum, parallel to the rectosheet guide. In face printing operation, the sheet-turning device can be uncoupled from the rectosheet guide cylinders. Additionally, there is provided on the sheet-turning device a format adjustment which can be adjusted independently of the rectosheet guide cylinders.
