Abstract (en)

A device for attaching a picket (3') to a rail (1), particularly suitable for fence assemblies and the like, which rail (1) is at least embodied as a tubular profile and has at least a hole (6) in a wall thereof for receiving the picket (3'), wherein the picket has a transverse through-hole (8) for receiving a pin (9) of a length such that the pin (9) protrudes on either side of the picket (3'), said pin (9) being of sufficient stiffness to connect the picket (3') to the tube without the need of additional heat treatments, such as welding, or complicated assembly operations, in conjunction with screw connections so diminishing transport and assembling costs.
