Abstract (en)

[origin: EP0381465A1] An article carrier of the wrap-around type having a top panel (20), bottom panels (12,28) and a pair of spaced side panels (16,22) interconnected so as to form a tubular structure in which articles are accommodated. Each open end of the carrier is spanned by end panel means (C1, C2) each end panel means being hinged to respective ones of the side panels of the carrier so that portions (58, 66:60, 68) of the end panel means are folded adjacent said side panels internally of the carrier. The fold lines (44, 46) by which the end panel means are hinged to the carrier side panels extend downwardly and outwardly relative to the top panel towards the bottom panels of the carton.
