Abstract (en)

[origin: EP0381569A1] The dryer is characterised in that there is provided inside the casing (8) for used air a movable gastight floor (17) which is capable of being brought into a plurality of positions inside this compartment in order to divide it into two compartments, one lower (8b), one higher (8a), separated in a tight manner, in that there are arranged transversely at the base of the column (1) above the zone connecting the casing for cold air and the casing for hot air recycling ducts (28) which communicate via openings with the base of the compartment (8) for used air and with the compartment (5) for hot air, and in that there are provided controlled means, such as fans (19), which are capable of drawing the used air from the lower part of the compartment (8) for used air, through the recycling ducts (28), to the casing (5) for hot air. <IMAGE>
