Abstract (en)  
[origin: CA2007768A1] SKI BOOT The boot comprises a shaft (2) in two parts which are articulated on a lower part (1) by means of two rivets (6). The front part of the shaft consists of two pieces (5, 7) which are mutually assembled exclusively by interlocking and catching, that is to say without the aid of auxiliary means of fixing. This construction makes it possible to eliminate the riveting operations and improves the capacity for enclosing of the leg by the shaft. (Figure 1)
