Abstract (en)

[origin: EP0381803A1] A packaging unit is used for dispatching ornamental plants, especially bunches of flowers (40). A rigid holding cuff (30) has a central opening (34, 35) for the insertion of stems of the ornamental plants and means for fixing the latter to the holding cuff (30). A rigid covering (20, 50) surrounds the ornamental plants and is of essentially prismatic shape. The holding cuff (30) can be fixed in the covering (20, 50) at its circumference. The covering consists essentially of an outer wrapping carton (50) and a bottom part (20) which is displaceable therein when packaging the ornamental plant. In the packaged stage, wall portions (11) of the bottom part (20) are in alignment at their underside with the underside of the wrapping carton (50) and are connected at their upper side to the circumference of the holding cuff (30). <IMAGE>
