Abstract (en)
[origin: EP0381838A1] To adapt the control device of a washing or rinsing machine or of a supply and dispensing unit for such a machine to the liquid washing or rinsing agent being used with automatic dispensing, a parameter memory (13) is arranged, together with a multiple plug (12), on a data carrier (6) which is surrounded by a protective housing (15, 16). This data carrier can be introduced into a receiving orifice (5) of the control panel (1) which is equipped with a spring strip for connecting the parameter memory to the control device. With the data carrier introduced, a surface equipped with an inscription field (9) for particulars relating to the stored parameters is visible through a window (10) in the control panel (1).
