Abstract (en)
[origin: EP0382710A2] A hood (2) has hood case which is built into an upper cabinet (1) and which forms, leaving free a useful cabinet space (10), a take-off duct (7) which leads from a take-off screen (4) arranged in the bottom region of the cabinet to a fan unit (6) provided in the top region or an intermediate compartment region of the cabinet (1). In order to obtain a cabinet space (10) of conventional depth and with good ventilation, the take-off duct (7), which is preferably divided into two part ducts, runs along the cabinet side walls (8) and the cabinet (1) receives at the rear an aeration duct (11) which leads upwards behind the fan unit (6). <IMAGE>
