Abstract (en)

[origin: WO8912418A1] This invention concerns a packet of toilet paper, a dispenser and the method of making the packet. The packet of toilet paper with the sheets folded so that they can be interleaved with one another to form a stack placed in a cardboard case (1) open at both ends is remarkable in that the case (1) has a first pair of opposite parallel surfaces (14, 15) adjacent to the folded edge of the sheets and a second pair of surfaces (12, 13) parallel to the surface of the sheets and perpendicular to the first pair, and an aperture (10) over at least one of the surfaces of the second pair (12, 13).
