Abstract (en)
[origin: EP0383042A2] In an information display box consisting of two moulded parts connected to one another flexibly, the first moulded part exhibiting a plurality of parallel cells for accommodating price and/or information labels, the second moulded part exhibiting at least a first window area for reading the price and/or information labels and a second window area for accommodating a second information label, and the moulded parts being constructed complementary to one another in such a manner that, in the position of use, in which they are folded together and form a closed unit, one moulded part plunges into the other one, a locking box which can be pushed on is provided for locking the two moulded parts together in the position of use. This provides an information display box, for example a price box, which is easy to handle and, in addition, exhibits an additional display area. <IMAGE>
