Abstract (en)
[origin: EP0383104A2] The invention relates to a ski with a ski binding which consists of a front jaw and a heel-holder which is coupled to the latter via a connection member. The front jaw and the heel-holder are fixed in each case on a slide of U-shaped cross-section, to the free limb ends of which inwardly projecting flanges are attached, which are mounted in a guide rail which is fixed to the ski. In order to be able to fix the ski binding to the ski without using screws, provision is made for each side part (1a) of the ski (1) to have a recess (1c) which is longer than the length of each of the two slides (6a, 6b), and for a groove (1b) to be recessed in each side part (1a), in which groove the flanges (6e, 6f) of the front jaw (3) and the heel-holder (4) are guided. <IMAGE>
