Abstract (en)  
[origin: EP0383110A1] The intention of the bottle is for it to be gripped and held particularly securely. For this purpose, a gripping region of the bottle is adapted ergonomically both to the right hand and to the left hand. The bottle has a heart-shaped recess (4). The part of the hand (12) between the thumb (10) and the index finger (11) can lie in said recess or, when held in the diametrically opposite position, the fingertips can lie in said recess (4). <IMAGE>
