Abstract (en)
[origin: EP0384474A1] A description is given of a container (1) having a container body (2) and a funnel-shaped base (4, 4', 4''), whose wall slopes from the container body (2) in a direction towards an outlet opening (5). Provided in the container (1) are inserts (9, 12, 14) which are supported on the base wall via at least one supporting region (7). In order to improve the support and to simplify the design, the supporting region (7) is provided at a transitional shoulder (6, 15), which reinforces the base wall, between a more flatly sloping wall section (4a) and a more steeply sloping wall section (4b) adjacent in a direction towards the outlet opening (5), so that the inserts (9, 12, 14) can be supported on both wall sections (4a, 4b).
